

Sustainable Weed Management in Agriculture with Laser-Based Autonomous Tools

The Third **Stakeholder Event** of WeLASER project is organized on the **19th of November 2021**. The main aim of this event is to present project developments and discuss environmental issues including environmental performance, key benefits and potential impacts related to the WeLASER application in practice. Please find attached the agenda of the Stakeholder Event [here](#). To register for the event, you can use the on-line registration form: <https://bit.ly/WeLASER--StakeholderEvent>.

Focus Group Interview (FGI) workshop is organized on the **2nd of December 2021** with a limited (up to 20 persons) group of end-users, manufacturers, researchers, policymakers and NGOs interested in this project. will be organized on-line. During the workshop, a focus group discussion and SWOT (Strengths, Weaknesses, Opportunities, Threats) analysis will be carried out. The intention is to get valuable insight regarding future implementation of precision agriculture techniques in weed control. We hope that the results of the study will help improve the design and develop business models of precision agriculture application in weed control and provide European policy recommendations in this regard.

Agenda of the workshop is attached [here](#). In case you are interested in participating in the FGI workshop, please fill in the on-line recruitment questionnaire: <https://bit.ly/WeLASER-Focusgroupinterview>. Depending on the number of applications we will send the confirmation of participation in this event.
