

We invite you to the 4th WeLASER Stakeholder Meeting

In WeLASER project development of technology that uses artificial intelligence and laser energy to remove weeds is accompanied by meetings with stakeholders. During the meetings various issues related to the WeLASER solution are discussed. We invite you to the 4th Stakeholder Meeting, which will be held on-line on November 24, 2022.

A team of scientists from Belgium, Denmark, France, Spain, Germany, the Netherlands, Poland and Italy is working intensively - in the WeLASER project - to develop an intelligent weed control system using artificial intelligence and techniques to coordinate the operation of the weed detection system, laser and autonomous vehicle. The implementation of this solution is expected to reduce the amount of chemicals used in agriculture.

During the 4th Stakeholder Meeting on November 24, information on recent project developments with the focus on the results of the integration and testing of the robot and main WeLASER systems in the field will be presented.

We invite you to discuss technical and functional issues as well as the main factors and strategies of implementing the WeLASER solution into agricultural practice.

See the agenda of the meeting. The meeting will start at 9:30 am. [LINK to agenda](#)

We invite you to register via the application form [LINK](#)
